FABRICMATE
WALL FINISHING SOLUTIONS

THE ULTIMATE WALL FINISHING SOLUTION

Pre-Made Panels (1 Series)

B
BEGINNERS

Our Pre-Made Panels show up at your door ready-to-hang. They can bring acoustical, tackable, and/or wall protection benefits to nearly any space. Multiple ready-to-ship sizes are available. Combine multiple panels to increase benefits. Custom Graphic Printing available.

Modular Panels (3 Series)

B
BEGINNERS

Our Modular Panels are an incredibly easy way to install a long (too large for shipping box) panel. Modular panels come with 2 end pieces that are used to essentially book-end a number of middle pieces (all pieces are 2' wide) to create your desired panel size. Use your own Fabric or Contact Us for Custom Graphic Printing.

DIY Panels (5 Series)

B
BEGINNERS

DIY Panels are great for Do-It-Yourselfers and others who would like to receive all the components (pre-cut to size) to build an acoustical and/or tackable panel on the wall. Multiple panels can increase acoustical benefits while adding aesthetics and wall protection to your environment. Includes all components needed to build and hang the panel.

Site-Fabricated (7 Series)

I
INTERMEDIATE

Our Site-Fabricated Systems are a great way to create custom panels or full-wall installations that can easily be modified on the fly to accommodate changes or unforeseen architectural anomalies. Customize nearly every aspect of our system to end up with a useful (acoustic/tackable/etc) panel or full-wall installation that looks great.

ACOUSTIC | TACKABLE | HIGH IMPACT | SUSTAINABLE | THERMAL | FIRE-RATED | NON-ABSORBENT

Our selection of 1/2" (Classic-Line) Panels and Full-Wall Systems are unsurpassed in benefits, ease of installation, and available options/customizations. We have multiple installation types available (shown above), Flex-Frame (curvable Frame options), and a variety of edge options. Utilize your own backing/substrate or (we recommend) using one of our ReCore® options. ReCore® is fabricated from recycled content ranging between 65% and 96% post-consumer content (based off Specifications), and is itself 100% recyclable at end of life. ReCore® offers

potential acoustic, tackable, wall protection, and thermal benefits in a safe-to-handle, anti-microbial substrate. We offer Fabrics that have been tested with our system for acoustics, tackability (without leaving noticeable holes), fire-rating, as well as working well with the Frame. Most Fabrics will work with our system but we do recommend testing any custom Fabrics with a Compatibility Sample to ensure they are not too thick or thin for the Frame jaws and are not see-through. We are happy to answer any questions and assist with any custom applications.

All Frame Profiles Available in Curvable Flex-Frame®

1/2" (Classic-Line®) Backing Options

Safe to handle, easy to work with, 100% recyclable at end of life, anti-microbial, anti-fungal, ASTM E84 Class A fire tested (and passed!), non-hygroscopic, non-toxic, can be direct applied and used raw. MaxTack can be used as a pinboard and tacked repeatedly while also still supplying acoustic and wall protection benefits. SoftTouch is utilized more often for aesthetics (pillowed look) and wall protection.

Fabric Options

We offer pre-tested Fabrics that are not only great looking but also perform great with our systems. They are acoustic and tackable and can help transform your boring wall into a beautiful functional surface. We love our fabrics but we know you might already have a favorite fabric that you'd like to use... we recommend ordering a Compatibility Sample to ensure your fabric will work with the system.

Tango

Tango is a reliable, high-traffic fabric that is both acoustic and tackable. The weave allows sound to pass through and be absorbed by the backing.

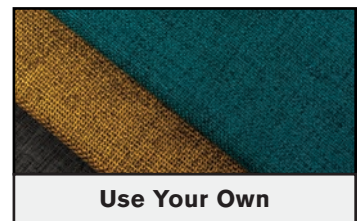

Parallel

Woven with multiple hues of similar colors, Parallel has a very textured and sophisticated look. Can be used for Acoustic and Tackable purposes.

Closed Circuit

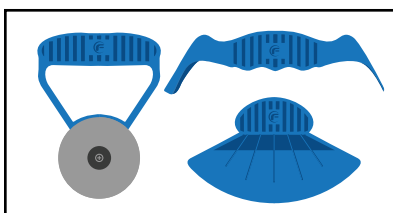

A tightly woven fabric with a subtle block/rectangle pattern. A great fit for modern offices, conference rooms, work stations, and other high-traffic areas.

Use Your Own

ALWAYS TEST WITH THE SYSTEM FIRST
Most Fabrics will work with our System but we always recommend testing first to ensure it isn't too thick or thin to be held by the Frame jaws.

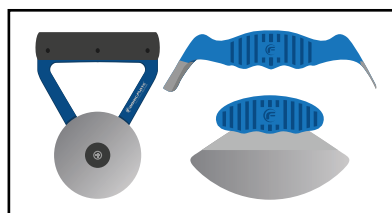

Available (and recommended) Tools

DIY SERIES

For installing a few panels or less.

- DIY Rocker
- DIY Roller
- DIY 4-in-1 Tool
- Utility Knife (*not shown*)
- Chamfer Cutters (*not shown*)
- Fabric Scissors (*not shown*)

PRO SERIES

For multiple panels/installations.

- PRO Rocker Tool
- PRO Roller Tool
- PRO 4-in-1 Tool
- Utility Knife (*not shown*)
- Chamfer Cutters (*not shown*)
- Fabric Scissors (*not shown*)
